

Maurice McCarthy

Director, Organic Power Ltd.

FBD House, Mardyke St., Skibbereen, Co. Cork, Ireland

Date: January 5, 2011

Dear Mr. Maulce,

It is my pleasure to invite your attention to our intention that JPOWER is interested in providing the consulting services on the Seawater Pumped Hydroelectric Energy Storage (PHES) Scheme at Glinsk near Belmullet, Co. Mayo which Organic Power Ltd. is proposing.

At the beginning of December, 2009, JPOWER received the delegation from Organic Power Ltd. to Yambaru Seawater Pumped Storage Power Plant in Okinawa which JPOWER constructed and has been operating as a plant owner for around 10 years without any troubles. During and after the plant tour, we had discussion and exchanged the opinions with the delegation regarding the specific technical issues relating to the only one plant of this type in the world.

Through the discussion, JPOWER was deeply impressed with your idea of the Seawater PHES Scheme at Glinsk, felt your strong intention of the project development, and understood the current electrical environment in Ireland. From then on JPOWER has been providing technical advices and/or asking our questions on your proposals in reply to your requests of general layout of the project components, construction method especially for tunnel works, specific issues for protection against seawater seepage from the upper pond, protection against the corrosion on the hydro-mechanical and electro-mechanical equipment by seawater, etc.

I reiterate that JPOWER is happy to act and be in cooperation with Organic Power Ltd. as consultants for the Project implementation.

Sincerely yours.

Shigeru Ariga

Office Director

Civil Planning & Design Office, Civil & Electrical Engineering Dept.
